

SYNRAD PS-401 DC Power Supply (Power-One FXC7000-48-S)

PS-401 Front View

PS-401 Rear View

AC Input Connections:

(180-264/342-528 3Ø VAC)

- * Attach AC safety ground (earth) to terminal labeled "PE".
- * Connect Phase 1 to terminal labeled "L1".
- * Connect Phase 2 to terminal labeled "L2".
- * Connect Phase 3 to terminal labeled "L3".

Detail of 26-Pin HD Signal Connector

900000000001

Output Interlock (Pin 5) and Output Inhibit (Pin 25) - connect to Logic Ground (Pin 9, 14, 15, or 23) to Enable DC supply.

Remote Sense V+ (Pin 19) - reference to +48 VDC Output <u>at laser</u>. Remote Sense V– (Pin 21 - reference to –DC Output <u>at laser</u>.

* These connections are built-in to the i401's DC Power Cable assembly

Rev 1 / 08 Mar 2011 P/N 900-20300-01

Distributed Power Front-End

FXC7000 Front and Rear Views

Features

- · Three-phase AC input
- · Suitable for 3U or 5U height mounting
- Single-wire current share or Droop current share
- Remote voltage adjust and current monitoring
- Overtemperature, overload, and overvoltage protection
- LED supply status indicators
- · Current-share control for up to 30 units
- Front panel selectable-input-range

Description

The FXC7000 Series of standalone or rack-mounted power systems provides true AC front-end capability to automatic test equipment, telecom, data communications, and other distributed power designs. The FXC systems may be paralleled up to 210 kW of output power and are intended for chassis-mounted installations with bolted connections. These power supplies provide excellent protection against input voltage transients.

The FXC has its fan located at the front of the supply, and voltage adjust, indicator lights, output bussbars, and connectors on the rear. Airflow is from the front through

the rear. Alarm, monitoring, and control signals are floating from the main output and can be referenced to the positive or negative output or sense line of the power supply. The output is floating with respect to the chassis and may be used as a positive or negative polarity supply.

The FXC7000 Series meets international safety requirements and is CE Marked to the Low Voltage Directive. This series operates on three-phase European voltages as well as (up to) 480VAC, delta or wye.

Chassis-Mountable Model

MODEL	OUTPUT	INPUT VOLTAGE RANGE	ADJUSTMENT	MAXIMUM OUTPUT	LINE	LOAD	INITIAL SETTING
	Voltage	3-Phase (VAC)	Range	Current	Regulation	Regulation (note 1)	ACCURACY
FXC7000-48-S	(NOTE 2) 48V	180 to 264 or 342 to 528	45.6V to 50.4V	145A	0.15%	0.2%	47.90V to 48.10V

NOTES: 1) With Remote Sense connected.

2). User-selectable input voltage ranges

Input Specifications

PARAMETER	DESCRIPTION/CONDITIONS		MIN	NOM	MAX	UNITS
Input Voltage - AC	3-phase delta low input range, nominal.		200		240	VAC
	3-phase delta high input range, nominal.		380		480	
	Continuous deviation from the above nominals		-10		+10	%
Input Current	Per phase at full rated load.	FXC7000 at 180 VAC:			30	ARMS
Inrush Surge Current	Internally limited.	Vin = 264VAC (one cycle). 25° C:			30	Арк
		Vin = 528VAC (one cycle). 25° C:			15	
Input Frequency	AC input.		50		60	Hz
Hold-up Time	After last AC line peak at full power.	208 VAC:	17			mo
•		400 VAC:	13			ms
Operating Frequency	Switching frequency, fixed.			100		kHz
Power Factor			0.90			W/VA

Output Specifications

PARAMETER	DESCRIPTION/CONDITIONS		MIN	NOM	MAX	UNITS
Output Voltage Adjustment Range	An additional 1.0 Volt is provided to the output terminals to load lead losses.	provide for	45.6	48	50.4	V
Output Power	Continuous duty rating.				7000	Watts
Output Current	Continuous duty rating.				145	Α
Efficiency	Full rated load (208Vac).		88	91		%
Regulation	With Remote Sens	Sense connected: e not connected: p Current Share:			0.2 0.75 2.0 0.2	%
Ripple & Noise	Measured at mating connector w/ 0.01μF + 10μF Tant.	20 MHz BW: 100 MHz BW:			1 2	% p-p
Overshoot / Undershoot	Output voltage overshoot/undershoot at turn-on.				0	%
Minimum Loads	Minimum loading required to maintain regulation.		0			А
Transient Response	Maximum recovery time, to within 1% of initial set point due to a 25% load change, 1A/μS.	Time: Deviation:			800 3.2	μs %
Turn-On Delay	Time required for initial output voltage stabilization after po	wer-up.			3	S
Turn-on Rise Time	Time required for output voltage to rise from 10% to 90%.				100	ms

Interface Signals and Internal Protection

AC Power Fail Warning Warning provided prior to Vout dropping 5% after loss of AC input. Auxiliary Power Output voltage - diode isolated. Inclusive of line, load, and initial tolerances. Output current. Output current over a compliance range of 0~10V. Normal output: Total error current: O.5 Current Share Static sharing deviation as a percent of full-load rating Active: for loads >10%. Input Range Select Status Maximum signal resistance in high input voltage range selection. Loss of Phase Warning Warning provided prior to protective reduction in current limit. Output Inhibit Voltage required to enable supply (0.5 mA sink). (NOTE 3) Output Overload Protection Straight line current limit (above approx. 5V Vout). Output Overload Warning Signal level on overload. Output Short Circuit Protection Output Protection Occurs on overload when Vout is below approx. 5V. May operate in burst-mode. Output Voltage Fault Signal Deviation from adjusted Vout that is considered as a fault. ±3 ±4 Output Voltage Margin Output voltage swing available through Margin pin (analog). Time between fault warning and shutdown.	RAMETER (NOTE 1,2)	DESCRIPTION/CONDITIONS		MIN	NOM	MAX	UNITS
Output current. Current Monitor Monitor output current over a compliance range of 0~10V. Normal output: Total error current: O.5 Current Share Static sharing deviation as a percent of full-load rating for loads >10%. Normal output: Total error current: O.5 Current Share Static sharing deviation as a percent of full-load rating passive: Input Range Select Status Maximum signal resistance in high input voltage range selection. Loss of Phase Warning Warning provided prior to protective reduction in current limit. 500 Output Inhibit Voltage required to enable supply (0.5 mA sink). (NOTE 3) Output Overload Protection Straight line current limit (above approx. 5V Vout). 149 Output Overload Warning Signal level on overload. 2.2 Output Short Circuit Protection Occurs on overload when Vout is below approx. 5V. May operate in burst-mode. Overvoltage Protection Latch style overvoltage protection. 55.2 57.6	vervoltage Protection	Latch style overvoltage protection.		55.2	57.6	60.0	V
Power Supply Present Signal Resistance to logic ground upon insertion of supply. 1000	ower Supply Present Signal	Resistance to logic ground upon insertion of supply.			1000		Ω
Remote Sense Maximum load lead loss compensation (round trip).	emote Sense	Maximum load lead loss compensation (round trip).				1.0	V

NOTES: 1) All logic outputs listed below feature a standard active pull-down output with 0.4V max at 40 mA sink capability, and a 100k pull-up to 5V.

²⁾ In addition to those listed below, signals and front-panel LEDs are provided to indicate: overtemperature/fan fault, AC phase imbalance, output good, interlock open, and supply inhibited. The FXP also provides 4 LED's indicating output loading.

³⁾ **Both signals must be pulled to logic ground for the unit to operate.** Enables are 100% redundant internally for applications where redundant inhibit is desirable. Contact factory for additional design details.
